### **DETAILED ACTION**

1. This communication is responsive to preliminary amendment 4/28/06. Claims 1-20 are currently pending in this application.

#### ***Oath/Declaration***

2. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:  
Non-initialed and/or non-dated alterations have been made to the oath or declaration. See 37 CFR 1.52(c).

Specifically to the inventor's citizenship.

#### ***Specification***

3. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

#### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohta P.N. 5,343,182.

Ohta discloses a magnet device for generating a static magnetic field in Magnetic Resonance Imaging. Applicant's attention is directed to Fig. 1 and corresponding

description. The magnet consists of main coils L1a and L1b and sub-coils Sa and Sb. The coils are driven to produce a FOV or DSV that is elongated in the Z or R direction. See Fig. 1 and Fig. 8. Ohta meets all the limitations of the claims at issue in their present form.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mckinnon and Watkins et al. disclose methods for generating variable magnetic fields in MRI. Note the abstract of each of the disclosures.
